

PROJECT 1 - MATH 401

DUE DATE: Thursday, September 12

INSTRUCTOR: George Voutsadakis

This project is supposed to give us guidelines on how we should be working on and presenting the formal projects that will follow. Give your work in the form of a small formal presentation and follow the guidelines of Section 2.1 as much as possible.

The goal of this project is for me to provide some feedback on whether we are on the right footing for the formal projects that you will have to complete for evaluation in the course. So, at this stage errors and misunderstandings are desirable to clarify what is to follow.

GOOD LUCK!!

In this assignment you will be working in groups of 3.

1. Form a team of 3.
2. Choose one of the modeling topics of Section 2.1.
3. Let me know which one you prefer and get **my approval** that it is acceptable.
4. Prepare a small paper on the topic following the modeling skeleton presented in Section 2.1.
5. Prepare also a small 15 minute presentation to present your paper (problem, assumptions, model, solutions, etc.) to your classmates.
